ABSTRACT

A survey of medicinal plant of Rajgarh district has been carried out with the co-operation of Vaidyas and tribal villagers. During study 20 medicinal plant belongings to 16 families have been identified for the treatment of Jaundice. Herbarium has been prepared which contains information pertaining to Botanical name, local name, parts used, their dose and process of administration.

KEY WORDS: Medicinal plants, Ethnomedicinal uses, Tribals area Rajgarh District.

INTRODUCTION

Rajgarh district lies in the northern part of Malwa Plateau end in the east part of Madhya Pradesh, it forms the north western part of Bhoal Commissioner's division. Rajgarh district extends between the latitude (23°28' and 24°18' north and the longitude 76°11' and 77°20' east). The total area of the district is 6,154 sq.km. It is one of the smallest districts of Madhya Pradesh and a population of

The tribes of the area are Sehariya gond and Korku, nat, kal, belia or sapera who have been traditionally using the local plants particularly for the treatment of various diseases.

MATERIAL AND METHODS

This is floristically very rich and herbaceous a wide range of bio-diversity. People living in these forests and adjacent rural areas depend upon plants for their daily needs and food.

Villagers have good knowledge about medicinal plant and their uses in different types of diseases. A perusal of literature shows that no systematic study and survey from Ethnobotanical point of view has been carried out in the present area of investigation.

The present communication deals with 20 medicinal plants used by the tribal communities in habiting the region of Rajgarh district for the treatment of Jaundice. The plants are arranged alphabetically each by its botanical name, family, local name and use of the plants.

Plants were collected during flowering period with the help of tribal’s and vaidyas, parts of the medicinal plants used in the treatment of Jaundice and other information’s were recorded as stated by the tribal’s and vaidyas. The specimens were identified with the help of published flora and relevant authorities.
Botanical name, local name, plant part used and process of administration of medicinal plant has been reported. The specimens collected have been maintained in the form of herbarium.

RESULTS AND DISCUSSION

We have identified 20 medicinal plants, which are used by the tribal’s of Rajgarh in their daily life for the treatment of jaundice, most of these plants are wild and some plants are cultivated. The medicinal plants have been listed alphabetically in Table-1. Despite extensive use of medicinal plants by the people of these regions, extensive work has not yet been done on ethno medicinal aspects in general and jaundice treatment in particular.

CONCLUSION

It can be concluded from this study that Rajgarh District is mainly agrarian and most of the plants grow luxuriantly as weeds in wastelands, fallow lands, cultivated fields etc. A good number are locally used in medicine, as vegetables and in folklore. Most of the medicinal plants used by tribal and local people of the district in day to day life for the treatment of different diseases jaundice were reported.
